BOOKI

One of the first project I created during my training. This website isn't working at all it was just to train me with the basics.

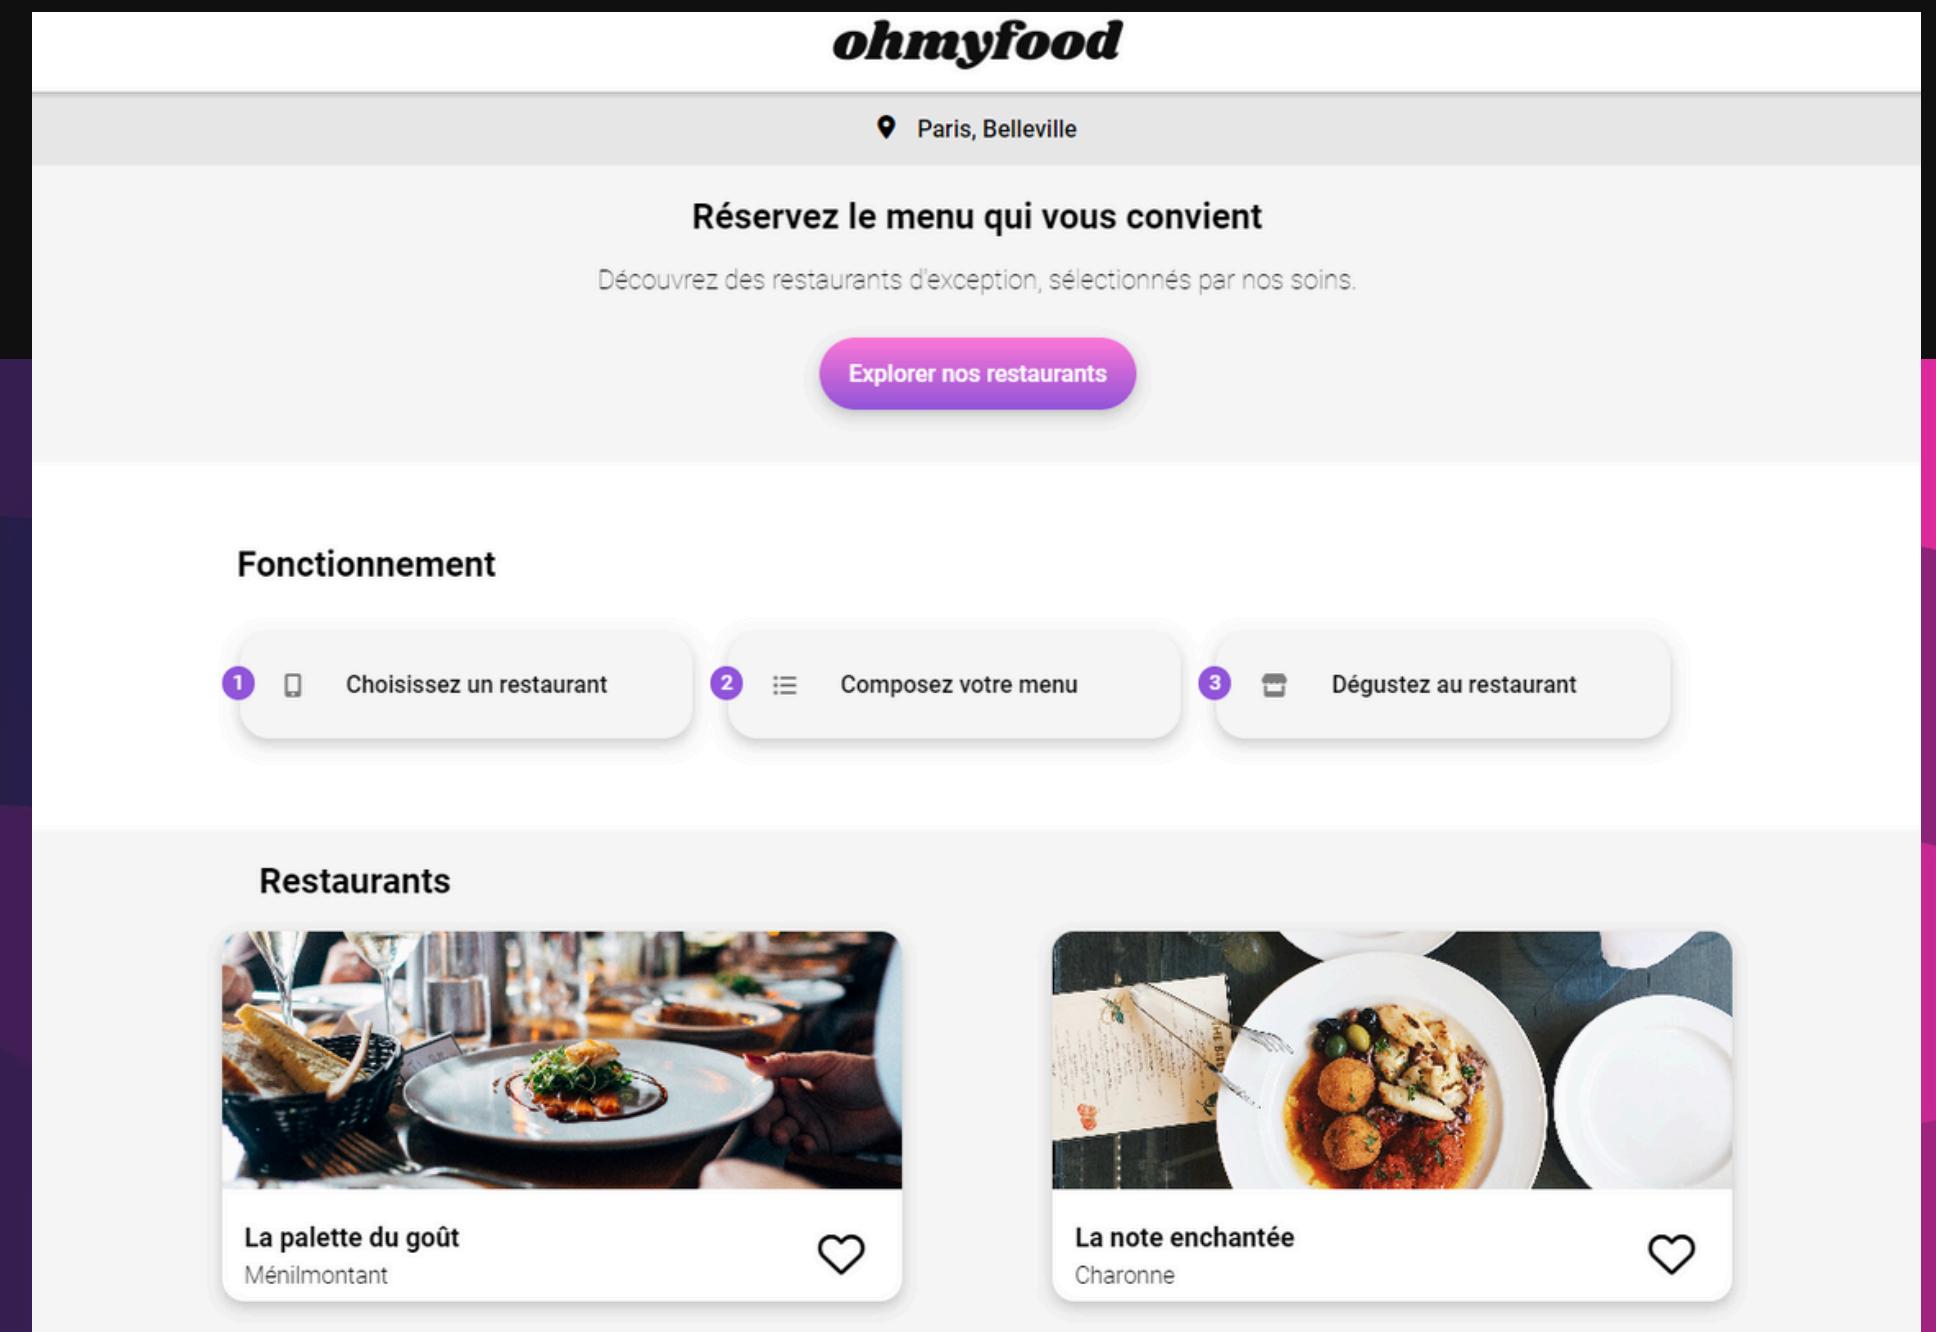

This project made me use CSS to interlock the different blocks of the website, to align them and to manage all the visual aspects.

Matéo Bouillot

Oh My Food

With this project, I pushed even further my use of CSS, this time to make the website animated.

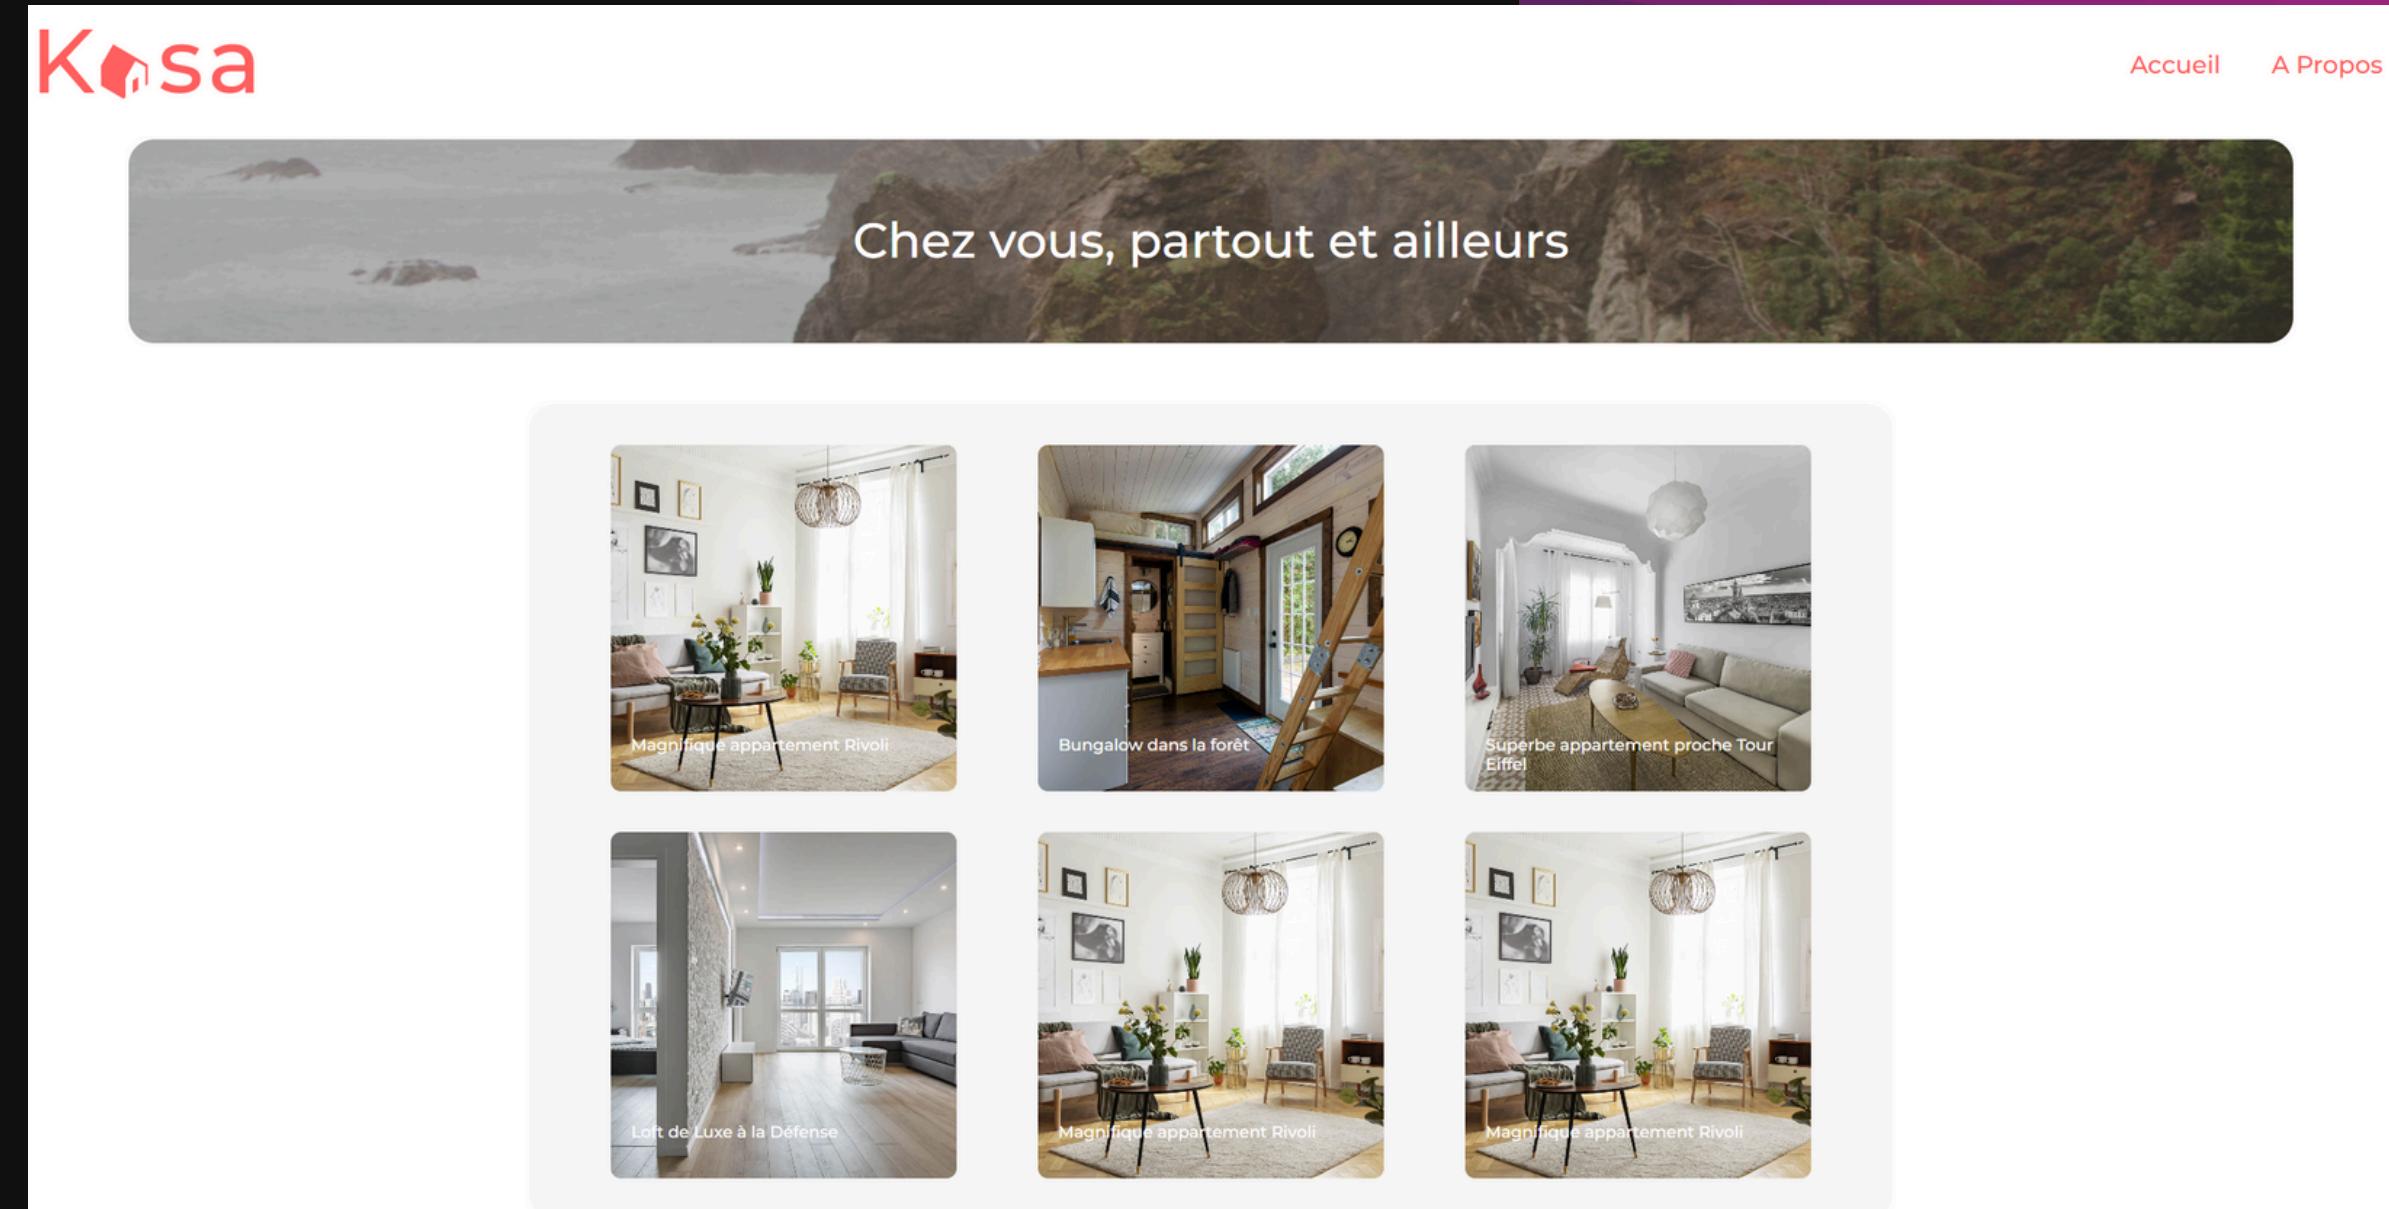

I implemented a loader,
a few hover animations
and a bunch more

Matéo Bouillot

Kasa

This project was the one with which I discovered react. It allowed me to easily create a more complex website.

It introduced me to multi page websites and how to manage them with react router, and how to break my website in multiple reusable components

Debugging

The screenshot shows a website for 'T events'. At the top, there's a navigation bar with links for 'Nos services', 'Nos réalisations', 'Notre équipe', and 'Contact'. Below the navigation is a large image of a conference panel at the World Economic Forum. A purple overlay on the image contains the text 'World economic forum', 'Oeuvre à la coopération entre le secteur public et le privé.', and 'JANVIER'. Below this image, there's a section titled 'Nos services' with the subtitle 'Nous organisons des événements sur mesure partout dans le monde'. It features three images with captions: 'Soirée d'entreprise', 'Conférences', and 'Expérience digitale'. The 'Conférences' image shows a large audience in a hall.

This project was a debugging project,
I got this website
but a lot of things
didn't work and I
had to fix
everything and get
it to work as
intended

optimisation & SEO

Just as the last one I didn't create this website, I worked on optimizing. I had to make this website not take 30s to load and had to optimize the HTML file for a better SEO

À propos Galerie Service Contact 

A propos de moi

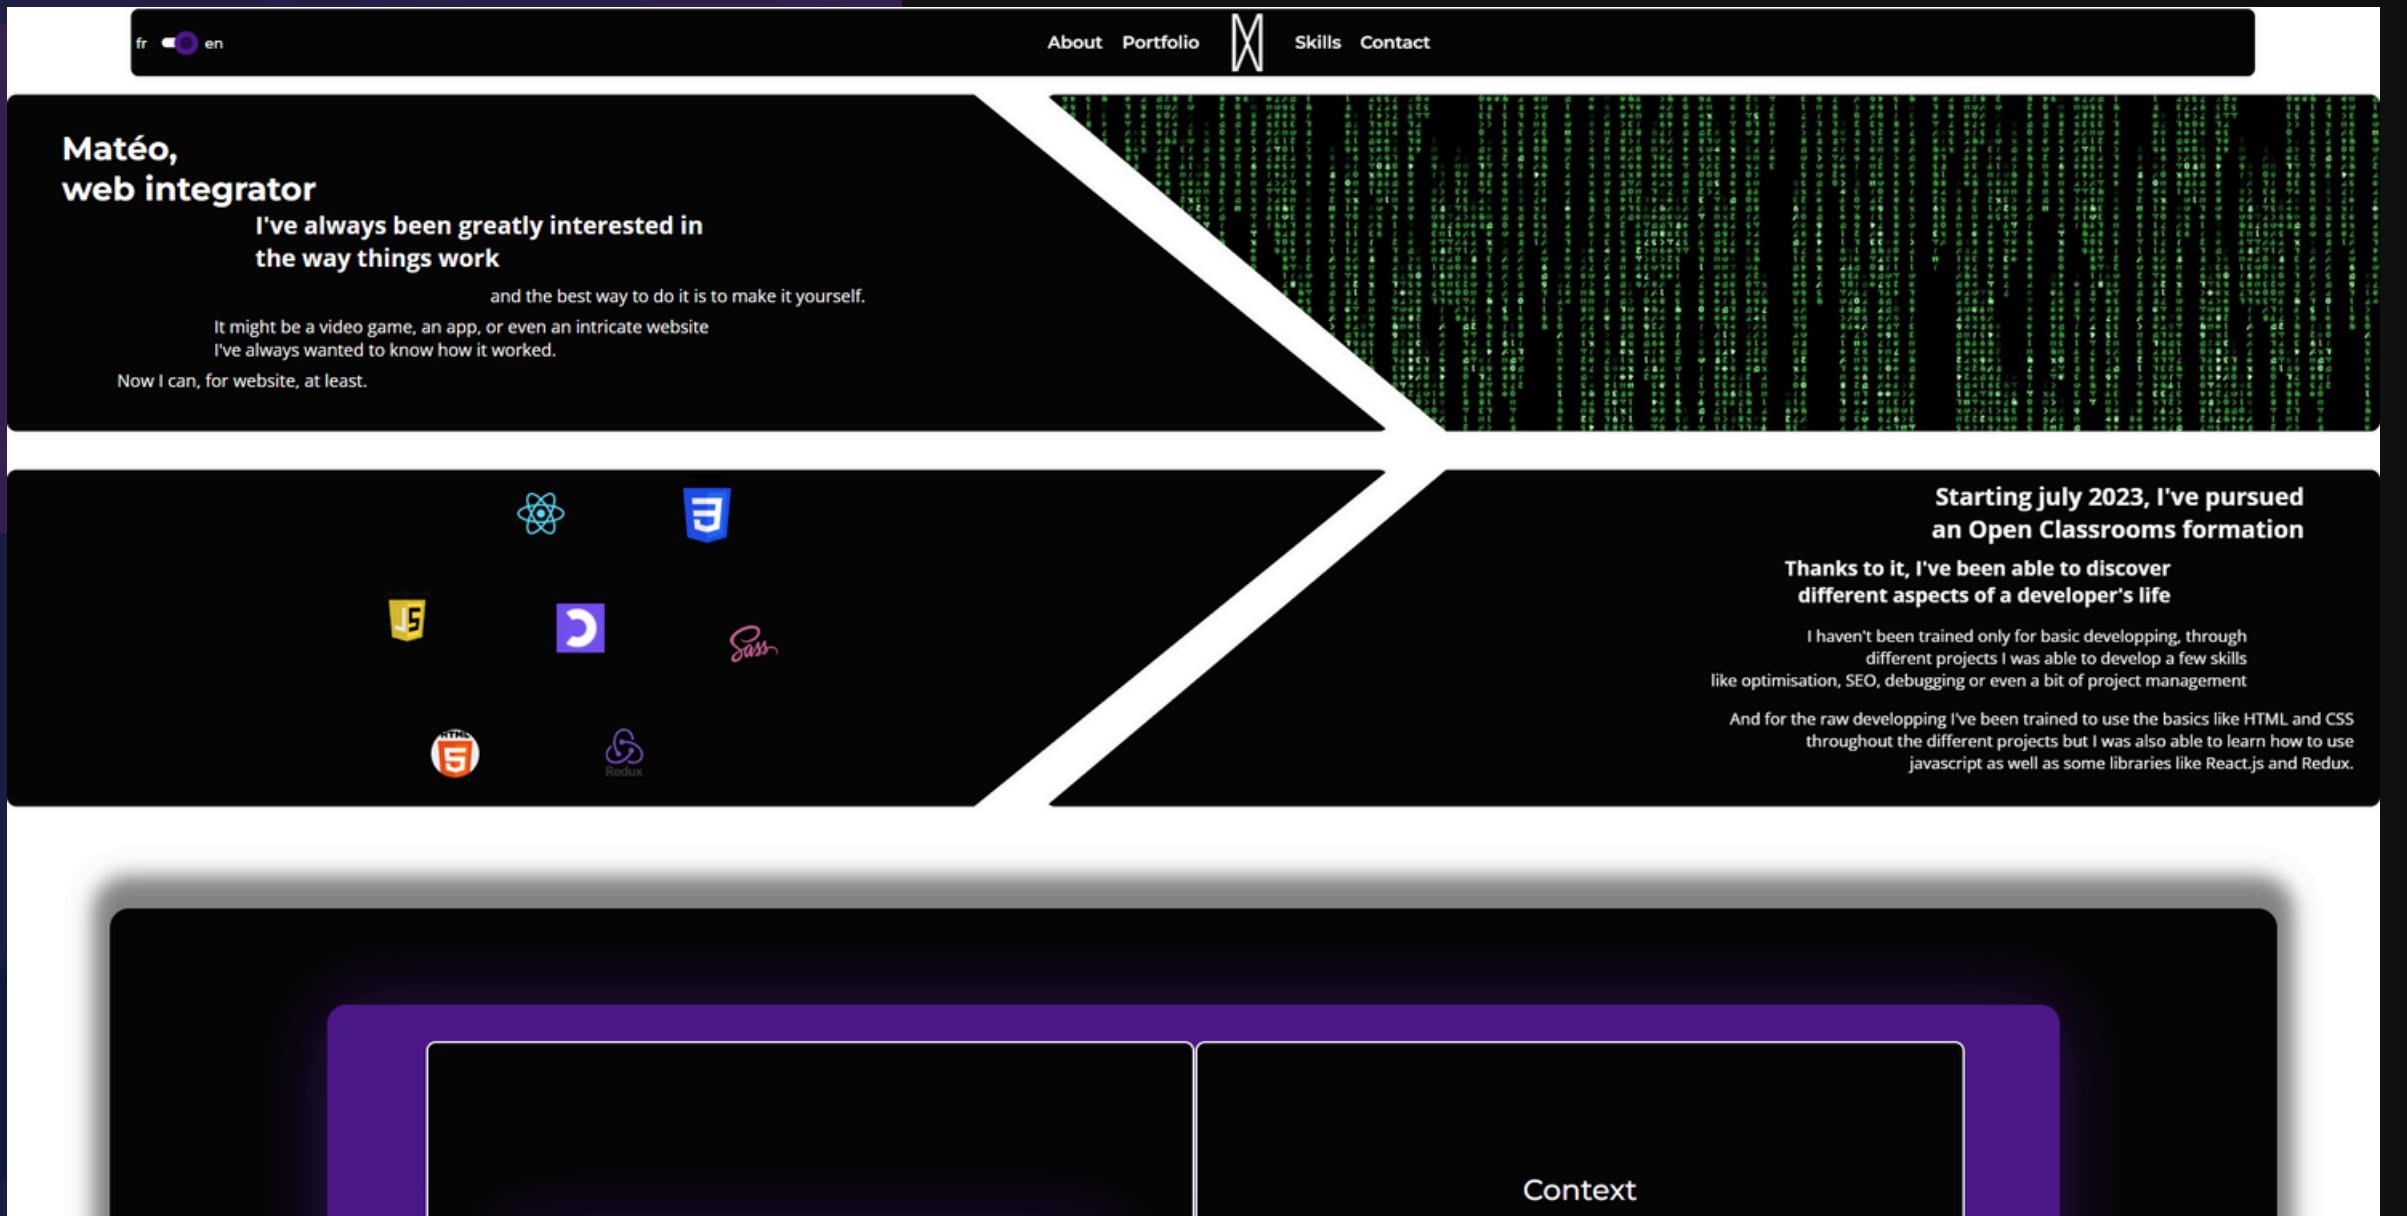

Devenir photographe était pour moi une évidence. Comme si j'y étais prédestiné. Saisir un moment, une émotion, une situation, un endroit, une lumière et les rendre immortels, voilà ce qui me fait vibrer.

Nous passons notre vie à chercher le bonheur, et lorsque nous y touchons, nous n'avons qu'une envie : le figer au travers de photographies pour le savourer avec les personnes qui sont importantes à nos yeux, ou le partager au plus grand nombre. C'est ce que

Matéo Bouillot

My portfolio

I had fun discovering technologies like framer motion that I used for every animation on this app

This is my first project on my own after my web integrator course. I created it in react and redux
